TREE FILE BROWSER

Based on the project: http://abeautifulsite.net/blog/2008/03/jquery-file-tree/#configuring

Connector code modified from: Martin Skou connector.

Developed by José de Soto García

NOTES TO INSTALL

In the controller folder you must change in def **dirlist():** the variable:

> **dir_server=''**
> For example: /opt/web2py/applications

This variable is to make a full path and prevent POST code.

In the view, **index.html** you must change the variable:

> **root: ''**
> For example: /pictures

This variable is the folder that you want browse inside the static folder.

LICENSE

This application is under GPL license. And it is only designed to read information from a specified root folder and prevent to view your entire directory structure by spoofing the root parameter. However I never tested it in production solutions, so just use it under your own risk.
